

THAWING OUT VIAL

1

- Indicate the date and time when a vial of Moderna COVID-19 Vaccine is removed from the freezer to thaw.
- Thaw in refrigerated conditions between 2°C and 8°C for 2 hours and 30 minutes.

- Remove a thawed vial of the vaccine from the refrigerator and allow to stand at room temperature for 15 minutes before administering.
- If using a frozen vaccine, thaw for 1 hour at room temperature between 15°C and 25°C .

2

NO RECONSTITUTION REQUIRED

3

- Moderna COVID-19 Vaccine **MUST NOT BE RECONSTITUTED**, mixed with other medicinal products, or diluted.

- Swirl the vial gently after thawing and between each withdrawal.
- **Do not shake.**

4

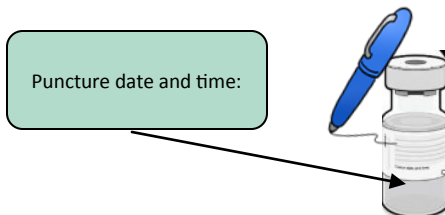

5

- Moderna COVID-19 Vaccine is a white to off white suspension and may contain white or translucent product-related particulates.
- Inspect the vaccine visually for foreign particulate matter and/or discoloration prior to administration.
- **Do not** administer vaccine if the above is noted.

- Record the date and time the vaccine vial was punctured.
- Discard any unused vaccine 6 hours after vial puncture.

6

PREPARATION OF INDIVIDUAL 0.5 ML DOSES OF MODERNA COVID-19 VACCINE

7

- Using aseptic technique, cleanse the vial stopper with a single-use antiseptic swab, and withdraw 0.5 mL of vaccine using a new sterile needle and syringe for injection.
- Using a 1 mL, 1 to 1 ½ inch, 25 gauge syringe to administer vaccine is preferred.
- Administer immediately.
